

# ZOORIZ<sup>TM</sup>

**NATURAL ZOOTECHNICAL LITTER**  
**STEAM STERILIZED**

# WHAT IS ZOORIZ...

ZOORIZ is only and exclusively rice husk, 100% natural and coming solely from Italian rice, dedusted and put through a process of steam sterilization by autoclaving at 130°C, which guarantees its purification from any chemical/organic residues.

**Treatment:** sterilization by steam cooking at 130°C

**Fields of application:** Litter for stables, riding schools, livestock farming, poultry farming

**Packaging:** bulk or packed in 200 litre (approx. 20 kg) heat-sealed polyethylene bags

- STEAM STERILIZED 130°C
- DEDUSTED
- TOTALLY DISPOSABLE
- ECONOMICAL
- VEGETABLE AND NATURAL
- ALWAYS AVAILABLE
- VOLUMINOUS
- INPRAGNABLE TO INSECTS
- 100% ITALIAN PRODUCT

## THE RICE HUSK

The outer shell of rice is called RICE HUSK. It is obtained from rice processing known as “dehulling”. This operation allows the siliceous floral bract commonly known as rice husk to be separated by means of rubbing with specific shelling or hulling machines. It is a very delicate operation as it must be carried out in such a way as not to fracture the grain which, at this stage, is still fragile. The rice grain then moves on to subsequent processing whilst the

husk follows its own personal industrial process. At this stage of processing the rice husk is ready to be transferred into the dedusting system and, subsequently, the packaging system.

## THE STERILIZATION

The sterilization process occurs when the rice husk is still an integral part of the rice grain.

This processing enables the rice mills to obtain a particular kind of rice called “Parboiled” resistant to longer cooking times and with greater preservation capabilities. The rough rice is soaked in large tanks of hot water, then undergoes high temperature steam (130°C approx.) vacuum treatment and finally is rapidly dried. In this final and only stage of the cooking process the rice husk is sterilized without any pesticides or weed killers which may have been present before harvesting and is ready for the final process of separation from the rice grain.

# WHY AND HOW TO USE ZOORIZ

ZOORIZ is a valid and economical alternative to conventional litters. It is easy to use and process, it is available throughout the year. Sterilization and dedusting guarantee the litter a high level of hygiene. Aseptic and anti-allergic, always soft and dry on the surface, it does not get compacted under the hoof thus preventing frog infections. Moreover, its bitter taste makes it unappetizing. It can be used in its natural state or with added enzymes. At the end of its cycle of use it makes an excellent soil fertilizer and its disposal is permitted by environmental regulations.

## HOW IS ZOORIZ USED?

To obtain a soft litter\* 15/20 cm thick it is sufficient to put down 4/5 packages of ZOORIZ sterilized rice husk. The initial layer can be kept up to and over 30 days\*\* removing the soiled surface layer daily and integrating it, from time to time, with some fresh rice husk.

*\*Standard 3x3 box    \*\*Period of time which may vary depending on the groom's choices*

# THE PACKS...

ZOORIZ is packed in transparent polyethylene bags 110 microns thick, heat-sealed and micro-perforated to allow for sufficient ventilation. The 200 litre (approx. 20 kg) packs of ZOORIZ are available both individually or on pallets of 20 packs each.

Pallet sizes: 100 x 120 x 200 h

Pallet weight: 400 kg.
